

Materials Accepted For Recycling

Aluminum Cans	We buy all types of aluminum cans. They can be crushed or not.
Automobiles	We buy automobiles. The fluids must be drained (motor, radiator and transmission) and the fuel tank cut open and dry. You can leave the glass, seats, interior and tires if you wish, but weight will be deducted from the total vehicle weight.
Bare Copper	We buy most bare copper. It should be free of any other metals such as brass. There are two different grades, #1 and #2. To make the #1 grade copper has to be 12 gauge or thicker and clean, meaning no paint, corrosion, or anything other than copper. The #2 grade is any copper that doesn't meet the #1 grade requirements.
Batteries	We buy most automobile and tractor batteries.
Brass	We buy most brass. Brass is worth more money if it is free of non-brass material.
Cardboard	We accept corrugated cardboard only. Sorry, but we cannot accept pressed cardboard (such as that used for 12-packs of drinks).
Catalytic Converters	We buy catalytic converters. To receive the converter price, it must still have the pellets inside. If the pellets are no longer inside it will be bought as scrap iron.
Electric Motors	We buy electric motors. Any size is acceptable.
Hot Water Heaters	We accept hot water heaters but we do not pay money for them.
Insulated Copper	We buy most insulated copper wire. There are two different grades, #1 and #2. The #1 grade is primarily when the individual strands are 12 gauge or thicker. Anything smaller will be the #2 grade. Wire with a heavy jacket of insulation will be worth slightly less than current market value and wire with a lighter jacket of insulation will be worth more than current market value. Examples are Direct Bury and MCM wire.
Lead	We buy most lead. Lead needs to be free of all non-lead material.
Newspaper	We accept all types of newspaper. We can not accept slick magazines or regular office paper.
Radiators	We buy most radiators, including those from automobiles and air-conditioning units. We pay more if all the steel is removed, but we'll take them with steel, too.
Refrigerators	We accept refrigerators, but the compressor has to be completely removed, and we do not pay for refrigerators.
Scrap Aluminum	We buy most scrap aluminum. There are no specifications to aluminum. We pay the most for clean, meaning no steel or plastic. Paint on the aluminum is okay and doesn't downgrade the aluminum. We cannot accept the glass inside aluminum frames.

Scrap Iron

We buy most iron, but there are some exceptions. We cannot accept oil drums of any size or type, no matter how old. All tanks must have a hole at least 2 feet in diameter to allow inspection of the inside. The inside of the tank must be dry with no residue. Small tanks of any kind are not acceptable. We do not accept small enclosed cylinders. Any air-conditioning units must have the compressor removed. We can accept scrap iron in any size, but you get more money for it if it's within the prepared specifications: less than 3 feet long and 1 ½ feet wide. Anything larger is unprepared and is worth less money. We can accept large farm equipment—the same requirements as automobiles apply.

Stainless Steel

We can buy most stainless steel. However to get the stainless steel price it cannot be magnetic and must be free of magnetic steel.

Washers & Dryers

We accept washers and dryers, but we do not pay money for them.
